

ABSTRACT

The present invention relates to a method for recording and displaying double-byte font set (DBCS) on a digital recording/playing device. This method is suitable for playing and editing the title or the filename of the compact disk (CD). This method comprises: storing a font file including various languages in a storage medium to be read by the digital recording/playing device; building a font recording space in a compact disk-recordable (CD-R); recording the font file in the font recording space; inputting an inside code to specify a font code in the font file; recording the inside code in the compact disk-recordable (CD-R); searching the font code in the font file mapping to the inside code; the digital recording/playing device reading the searched font code; and updating the on screen display (OSD) based on the font code.
